# TOBACCO REPORT

South Carolina Department of Agriculture

WILLIAM L. HARRELSON, Commissioner

### **1973: What A Year For S.C. Tobacco!**

What a year 1973 was for South Carolina tobacco! There were events like a crippling January snow and ice storm, heavy June rains and flooding, balloting, a court case, worries over fuel and fertilizer, record average prices and to top off the year, an announced 10 percent allotment increase in 1974 for a crop already pressed to meet demands for labor, fertilizer and fuel.

In early January, tobacco producing sections of South Carolina were struck by a frigid visit from Old Man Winter which left in its wake crumpled sections of auction warehouses throughout the Pee Dee area.

Nearly one third of the State's 36 warehouses were either destroyed or damaged by the heavy snowstorm. Roofs of many of the warehouses buckled under the weight of 17 inches of snow in some areas. For a while, concern was expressed that owners could not replace them in time for the summer opening. They were, although in many cases, workmen were on the job right up until the July 24 opening date.

Wet weather the next two months delayed farmers in their planting operations, but this was only a hint of things to come.

Tobacco farmers and especially those in Clarendon, Florence, Darlington and Williamsburg counties must have felt the sky had fallen in mid-June. Heavy rains and ensuing flooding of the Black and Pocatigo rivers in Sumter, Clarendon and Williamsburg counties left hundreds of acres of tobacco crop land under water. Only quick work by farmers in getting the water off their land prevented a total crop loss.

The State Agriculture Stabilization and Conservation Service office estimated damage in the millions of dollars for Clarendon, Darlington, Florence and Williamsburg counties. Colleton, Dorchester, Georgetown, Lee and Sumter counties suffered losses of hundreds of thousands of dollars. Total dollar losses amounted to over 12 million for the state.

In a year-end wrap up, newspaper and broadcast members of the Associated Press mentioned this happening as one of the big stories of the year of 1973.

Later in June the State ASCS conducted a survey to determine farmer preference for markets to sell their crop.

This action tossed another dilemma in the laps of farmers.

Results of the survey indicated farmers wanted to sell their tobacco on nearby auction markets. Shortly after results were announced, a suit was filed in federal court seeking to halt the use of this plan for allocating selling time to tobacco markets.

The following week the suit was postponed for at least a year after it was determined that the 1973 flue cured tobacco markets would not

operate under the controversial suggestion.

In mid-July, flue cured tobacco growers in the Carolinas, Virginia, Florida and Georgia voted to continue price support and acreage-poundage controls on tobacco for the next three years.

### **Opening Prices Predicted by Commissioner Harrelson**

South Carolina Commissioner of Agriculture William L. Harrelson, also in mid-July, predicted record prices for the 1973 crop despite effects of the June rains.

The South Carolina Tobacco Warehouse Association set an opening date for the 1973 crop of July 24.

A new high opening day average of \$83.15 per hundred pounds was reported by the Federal-State Market News Service for the Border Belt (South Carolina-North Carolina) markets for 8,889,960 pounds sold. The '72 high was \$80.72 per hundred for 9,650,339 pounds.

South Carolina's 11 markets sold 5,373,867 pounds for an average per hundred of \$83.24.

Only .4 of one percent of the receipts went to Stabilization Corporation against 2.6 percent for the 1972 opening day.

Second day sales for July 25 climbed to an average per hundred of \$83.54 on the belt with South Carolina showing an average of \$83.58 per hundred for 5.4 million pounds sold. This banner pair of days enabled opening week 1973 to surpass opening week 1972 in South Carolina by an average of \$83.63 to \$81.94.

In the first of a series of weekly sales reports to the South Carolina Department of Agriculture from the state's 36 warehouses, producer sales of 15,907,153 pounds were listed for \$13,301,039.72 with an average of \$83.62.

The second week of sales got off to a fine start with an average of \$85.50 for the belt and \$85.73 for South Carolina's 11 markets.

Second week prices on South Carolina markets showed an average of \$84.67 per hundred against an \$85.42 mark for the 1972 crop.

The weekly report to the South Carolina Department of Agriculture amounted to a grand total of 21,332,149 pounds sold for producers with receipts of \$18,226,227.09 and an average of \$85.44.

Poundage totals began to increase as the Aug. 6 figure for the belt showed over 10 million pounds going for an average of \$86.24 per hundred.

For the third week, reports by the warehouses to the South Carolina Department of Agriculture totaled 22,200,980 pounds for \$19,127,587.96 and an average of \$86.16 per hundred pounds.

The top price paid for the week was \$91 per hundred with approximately 90 percent of the tobacco selling within the range of \$85-\$91 per hundred, according to the Federal-State Market News Service.

### **Parade of Record Averages Starts**

Fourth week sales got underway Aug. 13 with a new all-time high daily average of \$87.03 per hundred pounds established for the belt. It surpassed the old record of Sept. 11-12, 1972 by 41 cents. South Carolina sales for the day showed 5.5 million pounds going for an average of \$87.12 per hundred pounds.

These fourth week sales were marked by the best quality offerings of the season which resulted in an average of \$86.67 for South Carolina sales with over 80 percent of the averages in the price range of \$85-91 per hundred pounds. The belt average of \$86.62 for 36.5 million pounds was the highest weekly mark on record.

Reports received by the South Carolina Department of Agriculture from the state's 36 warehouses showed 21,030,704 producer pounds sold for \$18,233,697.86 and an average per hundred of \$86.70.

The record one-day mark lasted only one week as sales for the belt on Aug. 20 jumped to an average per hundred of \$88.01 for 9.3 million pounds. South Carolina's sales share reached an average of \$88.03 for 5.5 million pounds.

With the quality of offerings showing improvement, the fifth week of sales averages hit the highest level in the belt's history . . . \$87.58 with South Carolina claiming an \$87.64 average for 21.4 million pounds.

Warehouse reports to the South Carolina Department of Agriculture for the fifth week showed producer sales of 20,916,973 pounds for \$18,339,734.97 for an average per hundred of \$87.68.

This figure lifted the season's grand total over the 100-million pounds level to 101,387,959 producer pounds for \$87,228,287.60 with an average per hundred of \$86.32.

### **New Standards Set On Mondays**

Once again Monday sales proved to be "record setting time" as sales averages on the belt for Aug. 27 hit a staggering \$88.45 per hundred for 9.3 million pounds sold. South Carolina sales grabbed a share of \$88.43 per hundred pounds for 5.5 million pounds sold.

With final sixth week sales held on Aug. 30, one-sale South Carolina markets at Conway, Darlington, Dillon, Hemingway, Kingstree, Lamar, Loris and Pamplico rang down the curtain on the 1973 season.

The three remaining markets were suspended for Labor Day week and to allow companies to clear over-crowded warehouse floors. Auctions resumed Sept. 10.

Sixth week warehouse sales reports to the South Carolina Department of Agriculture included producer sales of 21,373,064 pounds for \$18,765,927.48 with an \$87.80 average, bringing the grand total for the season to 122,761,023 producer pounds for \$105,994,215.08 with an \$86.34 per hundred pounds average.

Resumption of sales on Sept. 10 saw another "Monday record setter" for the belt with 4.1 million pounds netting an average of \$89.39 per hundred pounds. South Carolina's three markets sold 1.4 million pounds for a mark of \$89.28 per hundred.

This record lasted just one day as sales for Sept. 11 on the belt showed 3.9 million pounds selling for an average per hundred of \$89.77. This time South Carolina markets sold 1.4 million pounds for an average of \$89.35 per hundred.

A new all-time high average for a week was established for the seventh week of 1973 on the belt when 16.3 million pounds went for \$89.73 per hundred.

Seventh week warehouses reports to the South Carolina Department of Agriculture showed a total of 5,507,501 pounds selling for \$4,945,748, with an average per hundred pounds of \$89.80.

### **Average Tops \$90 Sept. 17**

The Monday sales day of Sept. 17 was a red letter event for the belt when 3.6 million pounds skyrocketed to an average of \$91.57 per hundred pounds, another new all-time record. All three South Carolina markets averaged over \$90 per hundred for sales with 1.0 million pounds going for a figure of \$91.23.

For the eighth week of sales, warehouses reported to the South Carolina Department of Agriculture producer sales of 3,949,435 pounds for \$3,580,032.45 for an average of \$90.65 per hundred pounds.

Once again, the eighth week was a record setter on the belt with 15.0 million pounds averaging \$91.04 per hundred.

The ninth week started with just six markets operating on the belt including Lake City, Mullins and Timmons ville in South Carolina. Sales for Sept. 24 averaged \$91.28 per hundred.

South Carolina's three markets reported sales to the South Carolina Department of Agriculture for the ninth week of 4,746,905 pounds for \$4,219,927.96 with an average of \$88.90 per hundred.

An agreement by the tobacco marketing committee after sales of Sept. 27 allowed South Carolina one set of buyers for four days the following week and for three days on the ensuing week.

Tenth week sales began on Oct. 1. Final sales were held at Timmons ville Oct. 4.

With only markets at Timmons ville and Mullins selling the tenth week, the weekly South Carolina Department of Agriculture report showed 1,709,976 pounds going for \$1,504,949.44 with an average of \$88.01 for producer sales.

Sales were held only at Lake City for three days starting Oct. 9. The average for the belt of Oct. 10 was only \$83.89 per hundred, the lowest average since the third day of sales on the belt.

Lake City's market averaged \$84.40 per hundred for producer sales of 1,082,262 pounds with receipts of \$913,394.21 during the tenth week.

The 11th week opened with sales scheduled for warehouses at Lake City on Oct. 15-17 and Mullins Oct. 18.

For the week, the warehouse report to the South Carolina Department of Agriculture totaled 1,555,675 producer pounds for \$1,299,-204.85 and an average per hundred of \$83.51.

Only Mullins operated the 12th week and reports to the South Carolina Department of Agriculture were for 1,264,405 producer pounds for \$1,080,406.21 with an average per hundred of \$85.45.

Final sales for the belt and Mullins, too, were held Nov. 1.

For the 12th week, Mullins recorded sales of 1,623,925 producer pounds for \$1,359,080.20 with an average of \$83.69 per hundred.

### **Some Tobacco Remained After Final Sales Day**

Despite 53 auction days during the 1973 selling season, many South Carolina tobacco growers found themselves with a portion of their crop still on hand in the closing days of the auctions.

The Flue-Cured Tobacco Cooperative Stabilization Corporation had a program set up where growers could deliver their tobacco directly to two redryer receiving stations and receive payment based on government price support. From Oct. 15 to Nov. 9, a total volume of 468,627 pounds was received for \$388,269.38.

South Carolina markets for the season had a grand total of 144,201,-107 pounds of producer tobacco which earned cash receipts of \$124,-896,958.43 for an \$86.61 average per hundred pounds.

Both the cash receipts and average price were new records for Palmetto State producers. The Federal-State Market News reported of

1973 offerings: "There was larger percentages of low quality grades and a smaller proportion of fair and good than in 1972. There was considerably less leaf this year. From a color standpoint, the tobacco was more on the lighter side."

Stabilization Corporation receipts for the year amounted to 1,882,584 pounds or 0.7 percent of gross sales.

### **Commissioner Fought Proposed Acreage Income**

Commissioner Harrelson led a fight to oppose any increase in tobacco allotments for 1974. He cited troubles in marketing the 1973 crop in orderly fashion plus difficulty in obtaining fuel to cure the crop and anticipated shortages of fertilizer and other vital agricultural chemicals for 1974 planting.

This battle ended with the December announcement of a 10 percent increase for the 1974 flue-cured tobacco crop.

### **Uniform Weighing Practices Checked**

Consumer Protection Division personnel of the South Carolina Department of Agriculture again were active on the state's 11 markets throughout the buying season to assure uniformity in all weighing practices.

Each tobacco warehouse, under the Public Weighmaster Law, is required to have a licensed public weighmaster and any deputy weighmasters as needed to issue a statement as to the accurate weight of the commodity.

Commissioner Harrelson pointed out inspections tested fuel oil and LP gas delivery meters in the tobacco areas prior to the beginning of the harvest season to help assure accuracy in all deliveries.

"Our consumer protection specialists," he said, "visited each of the warehouses prior to opening day to check scales, obtain uniform weights of the hand trucks and sheets and to post this information for the benefit of the growers. We made periodic checks on the scales throughout the marketing season. As we have said before, our work in this field protects the farmer, warehouseman and buying company."

### **Soybeans Move To Top Rung**

Tobacco's long-time grasp on the top run in cash value for South Carolina was broken in 1973 by soybeans.

The South Carolina Crop and Livestock Reporting Service noted that value of production for soybeans in 1973 zoomed to \$134,188,000

from a figure of \$83,716,000 the previous year.

Tobacco's value of production was \$115,282,000 compared to \$111,854,000 in 1972.

This crop is grown in 18 of the 46 counties of South Carolina.

The impact of the crop reaches into many sections of South Carolina.

Money from the State's first 100-million dollar crop received by the grower helps pay the warehouseman and his help. The tobacco farmer also pays for such expenses as fertilizer, equipment and insurance plus furnishes for his home, food for his family and luxury items.

Money circulated by the tobacco crop supports an estimated quarter of a million South Carolinians in either a part or their total income.

Tax revenues are another vital benefit to the South Carolina economy from tobacco. The South Carolina Tax Commission reported that during fiscal year 1972-73, tobacco products sold within the state amounted to a net of some 20.5 million dollars in tax revenue. The Federal Government also receives millions of dollars from the same source in South Carolina sales. The State of South Carolina taxes cigarettes at the rate of six cents per pack while the federal government tax is eight cents per pack.

National tax revenue from tobacco for federal, state and local government units amounts to 5.2 billion dollars annually, according to the Tobacco Tax Council, Inc.

### **Tobacco Growing Linked With History**

History bears out the vital role tobacco played in the establishment of the New World. John Rolfe, whose romance and marriage with Pocahontas in 1614 brought him popular fame, was credited with planting the first tobacco seed in America. These seed were brought in from the Spanish colonies of Trinidad and Caracas. His first crop was cured at Jamestown, Virginia, in 1612 and a shipment of several hundred pounds sent to England to compare with the Spanish leaf used at the time by London smokers.

Bolstered by a favorable reaction, a new export trade was set up for the colonies and by the end of the colonial period, the tobacco colonies of Virginia, Maryland and the Carolinas were exporting some 100 million pounds of the leaf annually.

This export trade was partially responsible for the fresh hope which began to flourish in America at that time, making possible the creation of a vast, new English-speaking country.

South Carolina's tobacco growing industry received a big boost when the first tobacco market was established in 1890 after Florence County

farmer Frank M. Rogers had persuaded manufacturers from Durham, North Carolina, to set up a market at Florence.

Slowly and gradually, tobacco began to climb towards the top of the agricultural economy in the State. Producers in 1909 sold just over 31 million pounds of tobacco for 2.3 million dollars on South Carolina markets. In 1917, a big growth spurt was noted when 51 million pounds brought 11.7 million dollars. From this point, with few exceptions, tobacco production became a multi-million dollar farming industry in the State. Following World War II South Carolina growers were producing more than 100 million pounds of tobacco annually resulting in incomes of more than 50 million dollars. The biggest production year in history for South Carolina growers was in 1962 when over 166 million pounds was harvested. The biggest financial harvest was in the recently completed 1973 season when producer sales amounted to over 124.8 million dollars. The 1973 average of 86.61 cents per pound is the highest mark on record.

Tobacco grown in South Carolina is a Bright variety used primarily in cigarettes. It is cured by heated air within the tobacco barns which account for the name "flue cured." This tobacco is a resultant variety from Rolfe's experimental plants. Bulk curing of the crop is coming into popularity which is a system whereby the leaf is hung in bales while warm air is forced into the barn through vents.

### **Automation Comes To Tobacco Fields**

Tobacco production, long-known as a farm art in South Carolina, requires some 300 to 400 hours of labor to grow an acre of tobacco from the preparation of seed beds to harvest to market. Almost a full 12 months is necessary for this farm operation.

Throughout its 300 years plus, tobacco has demanded long, hard hours for the growing of top quality tobacco. With labor becoming more and more scarce in the Pee Dee area of the Palmetto State, growers are looking towards automation.

Clemson University scientists have been experimenting with a new system involving low-profile tobacco and once-over harvesting. This method strips all the tobacco leaves in the field in one harvest to eliminate the necessity of going through fields time after time as the leaves continue to ripen.

By using this method of production and mechanical harvesting of tobacco, small South Carolina growers may be able to overcome the shortage of labor, according to Clemson University scientists.

Extensive research was conducted in 1973 on this method in South Carolina.

Tobacco production in South Carolina has a history of small farmer operations and this research is being done to keep him in business.

Year-round tobacco growing follows the pattern of the markets closing in late September or by mid-October and even until late October as in 1973. In the following weeks, growers are reminded to select a site for their plant beds and get the site ready. After the bed site is selected, early fumigation is needed to aid in the production of superior plants. Seed, which grow into plants as tall as five and six feet, are so small at the beginning that about 443,000 of them make up an ounce.

Changing market conditions and appearances of diseases have resulted in demands for new and improved tobacco varieties. The most popular varieties are the newer ones which carry some tolerance to most of the common soil-borne diseases which strike the plants. Clemson University publishes an annual list of recommended varieties which growers follow usually.

Predominant soil series for tobacco growing in South Carolina are Norfolk, Varina, Marlboro, Goldsboro, Dunbar, Lynchburg and several minor types. Crop rotation and soil treatment are important in production. Rotation helps get the most from the soil and controls certain diseases. However, the limited amount of suitable tobacco-producing soil makes the rotation program hard to maintain on many farms.

After the tiny seed have grown into plants several inches tall in the plant bed, they are transplanted into fields either by hand or by machine. The spacing of the tobacco plants in the row of the field determines the yield and quality of tobacco produced. Close spacing reduces size and thickness of the leaf and often results in thin-textured chaffy leaves on the bottom area of the stalk. Growers, however, sometimes use this close spacing to increase per acre yields. Often this backfires because it results in more expense and a lower net price per pound. Wider spacing increases the size of the individual plant and produces leaves which are longer, wider and thicker.

In a normal growing season eight or nine weeks after transplanting, tobacco comes into "top." The seed head begins to form at this time and begins to "button out." Flowers start forming about a week later in what is known as the early bloom stage. Tobacco growers are ready to "top" or "sucker" at this time. Generally, the tobacco plant is topped out at the ball sucker or one to two leaves below, depending on the prevailing moisture conditions, fertilizer applied and the height of the plant at topping.

This topping is essential to the production of a high quality tobacco. It promotes leaf development, growth of suckers and stimulates root growth.

### **Harvesting, Curing Keys To Quality Production**

Harvesting and curing are two facets of tobacco production which test the skill of the farmer. It is possible to improve the quality of the crop if proper attention is given to these two techniques. The crop is ready to prime as soon as the leaves begin to yellow and are primed before burning begins. As the leaves are primed, they are either strung on sticks or bulk racked for placing in the curing barn. A tobacco leaf contains about 80 percent moisture as it goes into the curing barn. The removal of this excess moisture is the prime reason for the curing process, but the main value of it comes from the chemical changes that take place during the process. A successful curing requires that the excess moisture be removed under conditions that will allow the proper chemical changes to take place.

Curing preserves the quality, flavor and aroma that are produced in the tobacco plant in the field. Curing tobacco is a process of controlling temperature, humidity and air flow.

As tobacco growers harvest the green leaves in the field, they try to keep them uniform and ripe. These leaves then cure together and result in uniform grades which requires little or no sorting after being removed from the curing barn. Farmers who do not grade when harvesting have to sort the leaves after taking them off the curing barn sticks.

Tobacco is marketed as soon as possible after it is removed from the curing barn. South Carolina tobacco has been sold loose leaf since 1967 when the State was granted a total of 95 hours of loose leaf selling time at the beginning of the marketing period. Since 1968, the entire sales period has been loose leaf with full price support. Tobacco also is sold on burlap sheets 96 inches by 96 inches to provide a more orderly system of marketing.

**LIST OF SALES SUPERVISORS FOR THE  
11 TOBACCO MARKETS**

CONWAY — Mrs. Laverne Creel

DARLINGTON — George T. Roberts and George Denham

DILLON — Earl R. Alford, Sr.

HEMINGWAY — James Baxley

KINGSTREE — Ernest Granger

LAKE CITY — Marion S. Fowler

LAMAR — W. J. Carter

LORIS — Dayton Davis

MULLINS — Dick Lewis

PAMPLICO — John L. Steele

TIMMONSVILLE — El. Anderson

**LIST OF 36 TOBACCO WAREHOUSES FOR 1973****CONWAY (2)**

Horry 1 & 2 — E. H. Cox, and W. O. Newell

New Farmers — T. Elmo Mitchell, T. T. Mitchell, and Mrs. A. D. Strickland

**DARLINGTON (3)**

Center Brick — Whit Jackson, and Kelly Ritter

Planters-Milling — Harold Y. Hodges, Sr., Harold (Skip) Hodges, Jr., and J. E. Mozingo, Jr.

Price's — C. M. Nunn, Harold L. Nunn, and J. L. Nunn

**DILLON (2)**

Big Tin — A. V. Bethea, Jr., Thomas C. Bethea, and E. A. Parrish

Pee Dee No. 1 & 2 — D. M. Dew, Jr.

**HEMINGWAY (2)**

Big "4" — H. E. Hemingway, and James W. Stewart

Tobacco Growers — J. W. King, R. B. Lawrimore, and W. T. Nesmith

**KINGSTREE (4)**

Brown Bros. — Alton Brown, Edwin Brown, and M. H. Jacobs

Carolina — A. W. Chaffin, Ernest Granger, and W. M. Rodgers

Fair Deal — G. O. Joyce, and W. K. Joyce

Farmers — Alton Brown, and M. H. Jacobs

**LAKE CITY (7)**

Bowen's, Inc. — D. G. Bowen, Pres.; J. W. J. Floyd, Vice Pres.; K. E. Bowen, Sec.; and E. C. Bowen, Treas.

Farmers — Randolph Currin, and Stokes Lawrence

Growers — Ralph T. White

New Carolina, Inc. — Chris Rosser, and Paul O. Wilson

New Independent — Bailey W. Currin

Planters — J. W. Sparrow, and Henry B. Sparrow

Star-New Home — Francis Brown, Billy Lynch, and Jimmie Lynch

**LAMAR (2)**

Golden Leaf — W. J. Carter, and Preston Warr

Segars — N. C. Newman, and R. A. Warr

LORIS (2)

Brick — Harvey Graham, Sr., Harvey Graham, Jr., and Horace Graham

New Loris — Lavelle Coleman, O. L. Coleman, Rebert Gore, and Burden Norris

MULLINS (6)

Big Dixie, Inc. — James H. Brown, and E. H. Conner

Big 3 — Neal & Dixons, Inc. — James A. Battle, M. L. "Ike" Cribb, John D. Dixon, and C. C. Smith

Brick — Joe C. Daniel, and J. L. Dew

Daniel's — Joe C. Daniel, J. W. Daniel, and W. H. Daniel, Jr.

Dixon's — W. P. Clark, M. W. Cox, P. D. McMichael, and G. E. Smith

Twin State — P. R. Floyd, Est.; R. J. Harris; and John H. Waller, Jr.

PAMPLICO (3)

Independent — L. B. Coleman, John G. Finklea, A. A. Munn, III, F. M. Munn, T. E. Smith, Jr., and Howard H. Thomas

Pamplico — J. R. Coleman, and M. C. Coleman

Planters — W. D. Boling, Pres.; D. D. Evans, Sec.-Treas.; and G. F. Cox, Sales Mgr.

TIMMONSVILLE (3)

Farmers — Douglas L. Cook

Gregory's — Ray A. Baker

Growers — Kenneth M. Chilton
